

Creation of pan-European geospatial datasets - - some updates

**Joint EuroSDR & EuroGeographics Workshop
on Geodata Discoverability**

Eurostat – E.4 – GISCO – H.I. Reuter

GISCO – The Geographical Information System of the Commission

- Permanent service of the European Commission (Eurostat)
- Role: Answers needs of European Commission, Eurostat and the ESS for geographical information at EU/national/regional levels.
 - Provision of GIS (reference) data, services and software,
 - Support cartographic and spatial analysis activities,
 - Coordinates commission-wide GI activities,
 - Stimulate the use of GIS to support commission activities,
 - Support activities on the integration of statistical and geospatial information.

Official Journal of the European Union

L 19/43

COMMISSION IMPLEMENTING REGULATION (EU) 2023/138

of 21 December 2022

laying down a list of specific high-value datasets and the arrangements for their publication and re-use

(Text with EEA relevance)

THE EUROPEAN COMMISSION,

Having regard to the Treaty on the Functioning of the European Union,

Having regard to Directive (EU) 2019/1024 of the European Parliament and of the Council of 20 June 2019 on open data and the re-use of public sector information ⁽¹⁾, and in particular Article 14(1) thereof,

Whereas:

- (1) It transpires from Directive (EU) 2019/1024 that an EU-wide list of datasets with a particular potential to generate socio-economic benefits and with harmonised re-use conditions is a significant enabler of cross-border data applications and services.
- (2) The main objective of establishing the list of high-value datasets is to ensure that public data of highest socio-economic potential are made available for re-use with minimal legal and technical restriction and free of charge.
- (3) Harmonising the implementation of the re-use conditions of high-value datasets entails the technical specification for making the datasets available in a machine-readable format and via application programming interfaces (APIs). Making high-value datasets available under optimal conditions strengthens the open data policies in the Member States, building on the principles of findability, accessibility, interoperability and reusability (FAIR principles).
- (4) Annex I to Directive (EU) 2019/1024 lays down the themes of high-value datasets by listing six thematic data categories: 1) geospatial; 2) earth observation and environment; 3) meteorological; 4) statistics; 5) companies and company ownership; and 6) mobility.

Article 6

Entry into force and application

This Regulation shall enter into force on the twentieth day following that of its publication in the *Official Journal of the European Union*.

It shall apply from 16 months after entry into force of this Regulation.

Publication: 20.01.2023

Deadline: 20.June 2024

Annual update in process
Dissemination pending some
legal aspects

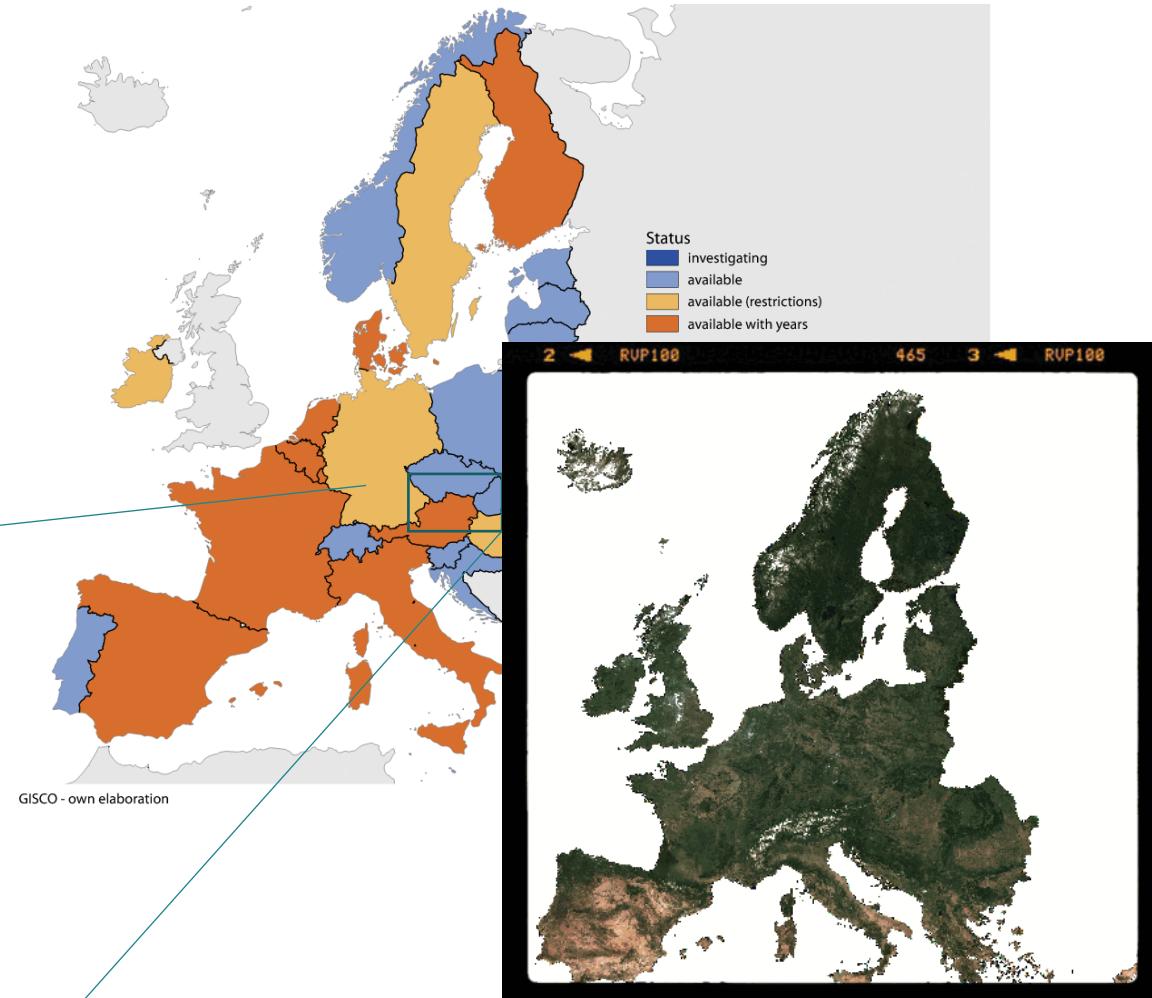

OrthoImagery (I)

- latest snapshot of OI from MS organisation
- If time series available – will be supported
- Depends on MS service performance + data requirements
- Up to 0.2m

OrthoImagery Status March 2022

Available in Development Instance

GIS Observations

- *Generalized data* (250k scale vs 10k on ground) – not usable Requirement: Data provided according to EU core reference data specification
- *Data are not aligned* across datasets (AU,AD,PC, BD,TN) (road in the middle of a building, address point in a different AU unit), Requirement: QAQC in MS
- Quite *varying quality control* across themes and countries Requirement: Quality Control
- Richness of datasets differs extremely (from line geometries only without attributes to full stack dataset according to INSPIRE specifications) Requirement: Rich data content needs to be in distributed datasets
- Feedback loop with MS extremely important Requirement: Resources at MS level to fix issues
- Various slight variations of INSPIRE implementation – we still prefer INSPIRE implementations. Requirement: Harmonising INSPIRE implementations

Various Examples of concave Hulls of Postal Codes across the European Union - top left: good positional dataset, top right: positional issues, bottom right: limited outliers on top of a good dataset with respect to postional accuracy, bottom right: positional issues together with

Conclusions

- Eurostat works on a range of topics for pan-European data sets
- Depending on the datasets a) European Databases are created or b) datahub pointing back to MS resources to provide services internally/externally
- Annual updates – In general good feedback iterations with data providers as they see their data used and can improve..... takes time + resources (e.g. funding available via REGIO/CONNECT/ESTAT)
- Progress is hampered by e.g. a) documented and available datasets, b) stability of services, c) performance of services and d) willingness of data providers.
- Code of conduct for Geospatial Data is required

Thank you
