

Update on Eurostat activities

Nikolaos Roubanis

Team Leader – Geographical Information

European Commission - Eurostat

Eurogeographics plenary meeting, 8 October 2020

Geospatial data and European Commission Priorities

- **European Green Deal:** implementation actions, covering the EU industrial strategy, infrastructure, buildings, networks, mobility, environmental norms, agriculture and land use, circular economy, etc., to strive for a climate neutral Europe
- **Demography and Democracy:** e.g. the long term rural vision –leave no one behind, nowhere.
- All relevant to geographical information - **An opportunity not to miss!**
- to strengthen the cooperation of NMCA and NSI and work closely together
- to show the power of integrating geographical information and statistics for supporting and monitoring environmental policies
- to add value and visibility to both geospatial data and statistics with more relevant spatial analysis

Eurostat strategic plan objectives 2020-2024

How we will deliver on European Commission priorities?

Eurostat set the following specific objectives in its strategic planning:

- To remain a trusted point of reference for statistics and data on Europe for better policy and decision on EU
- To better meet user needs with relevant high quality statistics and fostering the use of innovative data and technologies
- To better communicate, promote and facilitate access to European statistics to all stakeholders

Developing synergies with more harmonised pan-European geospatial data is relevant to all three objectives

Eurostat developments in Geographical Information

Our aim: to continue supporting the cooperation of NSI – NMCA

- 2020 GISCO Working Group written consultation on two main actions: More access to Eurostat on National geospatial data and more focused support on NMCA-NSI cooperation projects and joint actions.
- Joint UN-GGIM: Europe – UNECE – ESS Webinar open to more participants and countries this year (over 200 participants)
- The need to work closer and develop joint activities was the main conclusion of the joint UNECE-CES – UN-GGIM: Europe plenary joint session in June 2020
- Eurostat support this cooperation at national and international level with grants for joint projects

The GEOSTAT project - work in progress on data integration

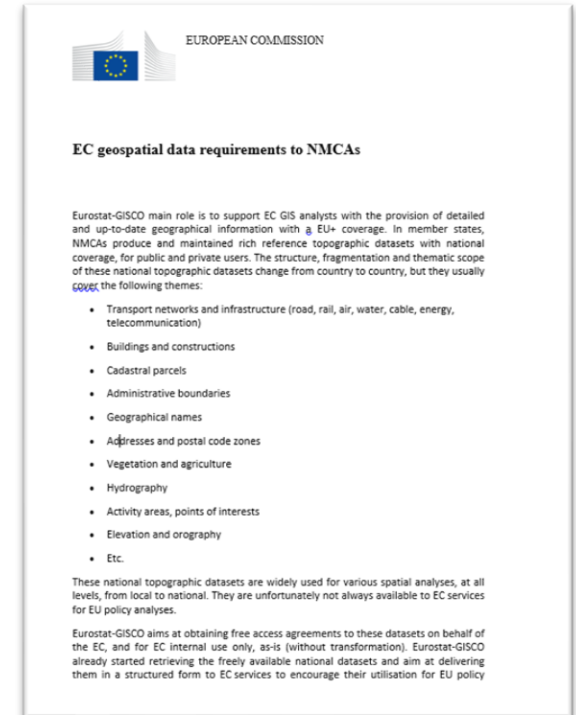

GEOSTAT 4 – February 2020 to April 2022

Deliverables:

- GSGF: Europe – to be finalised
- ESS methodological manual on the integration of statistics and geospatial information
- Use cases with guidance and service concepts
- Enhancement of the quality assurance framework extending it geo-data
- EFGS site – documentation and communication material
- EFGS Conference: 2020 (webinar 20-21/10)

Better serve European Commission needs for geospatial data

- Current situation: **A small part of existing NMCA data is being used at the EC for policy analysis.** We need to work together to change this.
- Short-term objective: Make existing NMCA data available **for EC internal use, as-is** (without transformation), for free.
- 2020 GISCO WG call for contribution: ***"EC geospatial data requirements to NMCAs"*** document. We described what we have and what we need.

Better serve European Commission needs for geospatial data

- We must rely on existing geospatial data produced by MS for policy analysis in the EC
- Long-term objective: Provide geospatial dataset with:
 - EU coverage, with possibility to run cross-border and pan-EU analyses ensuring cross-country comparability
 - Multi-thematic scope (administrative boundaries, transport networks, buildings, land cover, addresses, etc.)
 - Multi-scale representation (from local to continental scale)
 - Frequent and fast updates

Better serve EC needs for geospatial data

- Provision of pan-EU data to Eurostat
- Current new areas of work:
 - Healthcare services
 - Addresses
 - Education
- Next: Transport networks, administrative units.

Development of pan-European data on Healthcare Services

- Policy relevance questions requiring GI and statistics:
 - Where are the (main) healthcare services in Europe?
 - What are the population clusters with poor access to healthcare services?
- Work started in September 2019
- Relevance to the COVID 19 crisis

Development of pan-European data on Healthcare Services

[GISCO dedicated section on Eurostat's website](#)

We created and published a dataset of geo-localised healthcare information to facilitate spatial analysis for GIS users

<https://ec.europa.eu/eurostat/web/gisco/geodata/reference-data/healthcare-services>

The screenshot displays the Eurostat website interface. At the top, there's a header with the Eurostat logo, navigation links (News, Data, Publications, About Eurostat, Help), and a search bar. Below the header, the breadcrumb trail reads: European Commission > Eurostat > GISCO > Overview. The main content area is divided into three columns. The left column contains a sidebar with a tree structure: OVERVIEW, Geodata (Release calendar, Reference data), Administrative Units / Statistical Units (Population Distribution / Demography, GEOSTAT, Clusters, DEGURBA, Grids, Transport Networks, Healthcare services), Elevation, GISCO activities, Integrating Statistics & geospatial information, and Statistical Atlas. The 'Healthcare services' item is highlighted with a red box. The middle column features the title 'GISCO - the Geographic Information System of the COmmission - localise, analyse, visualise', followed by 'What is GISCO?' and 'What does GISCO do?'. The 'What does GISCO do?' section includes a map of Europe showing regional unemployment rates. The right column lists 'NEW' items: Degree of Urbanisation 2018, Postcodes and NUTS 2016 matching tables, NUTS 2016, and Countries 2016. Below this is a 'SEE ALSO' section with links to Geographical information system of the Commission (GISCO), Statistical atlas, NUTS Matching and Distance Tables, Regions, and Cities (Urban Audit).

Development of pan-European data on Healthcare Services

- Geocoded over 15 000 Healthcare establishment data
- Dataset content:

Location (as point)

Name

Address

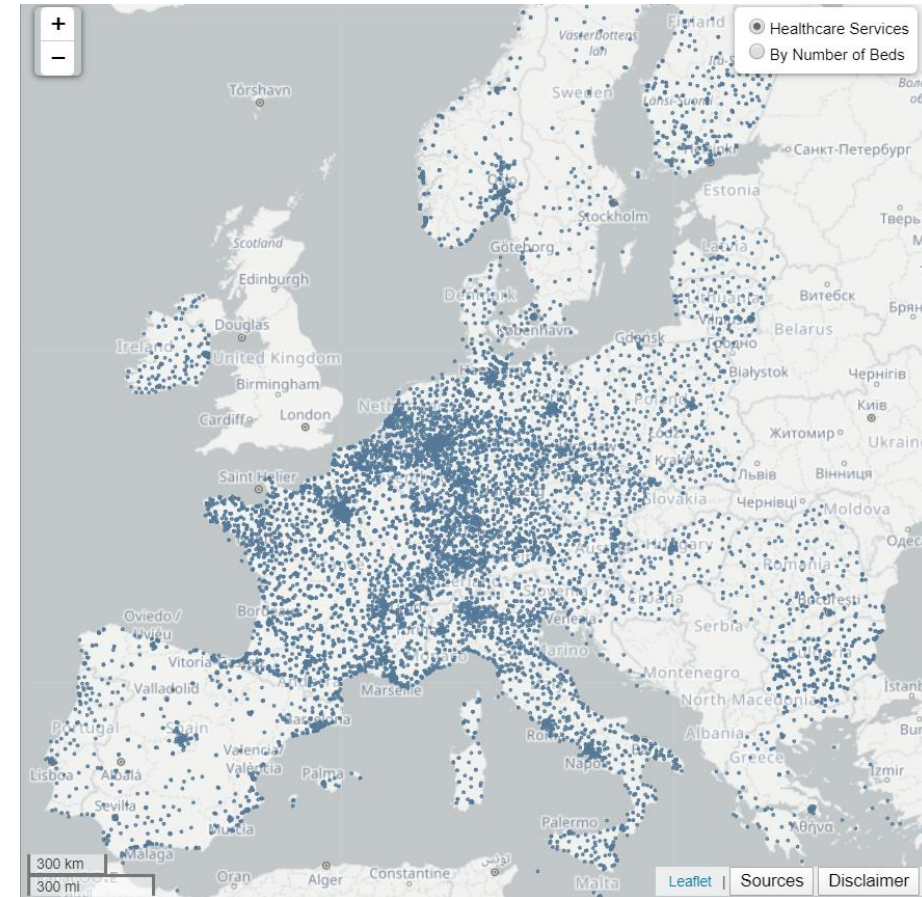

Capacity (number of beds, etc.)

Presence of emergency service

List of specialties

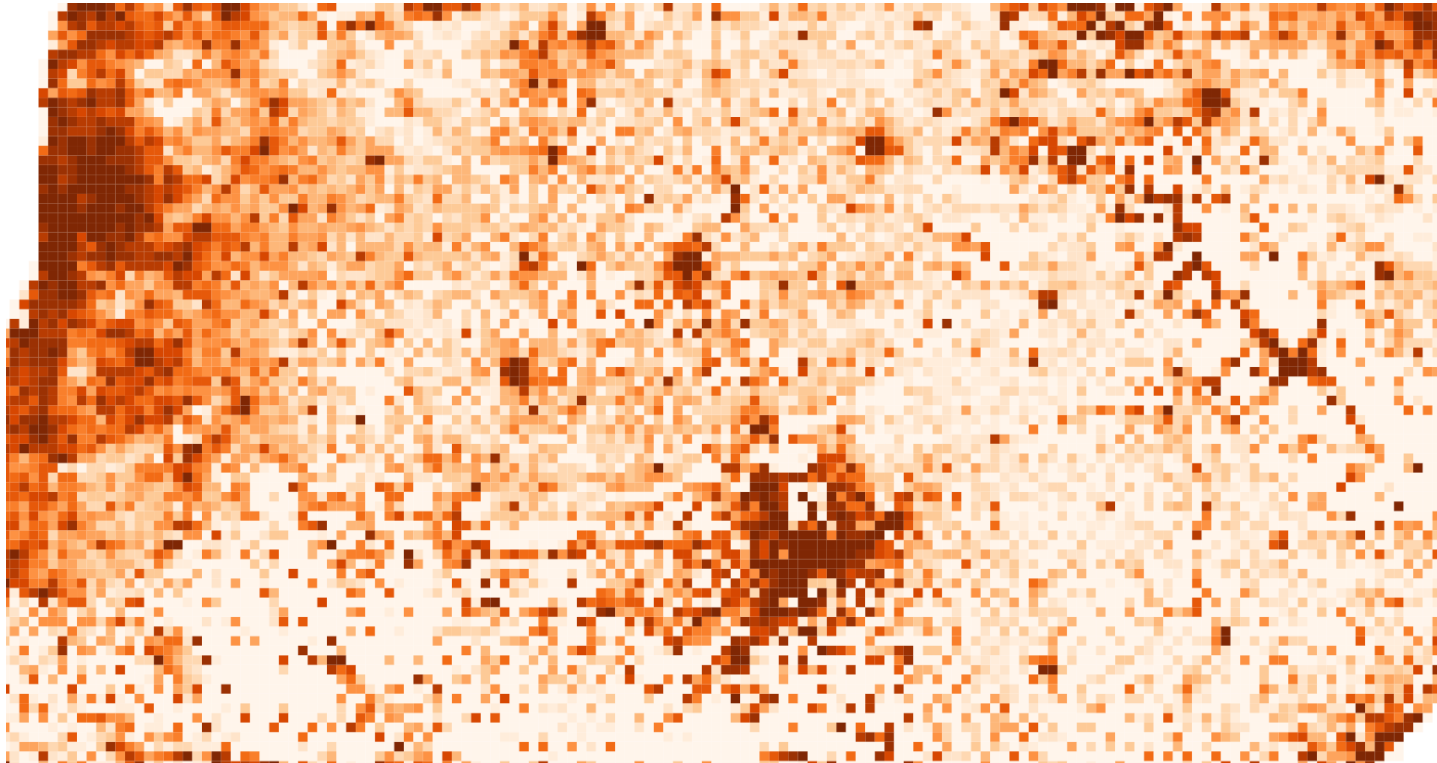

Status (public/private)

Phone, email, website URL

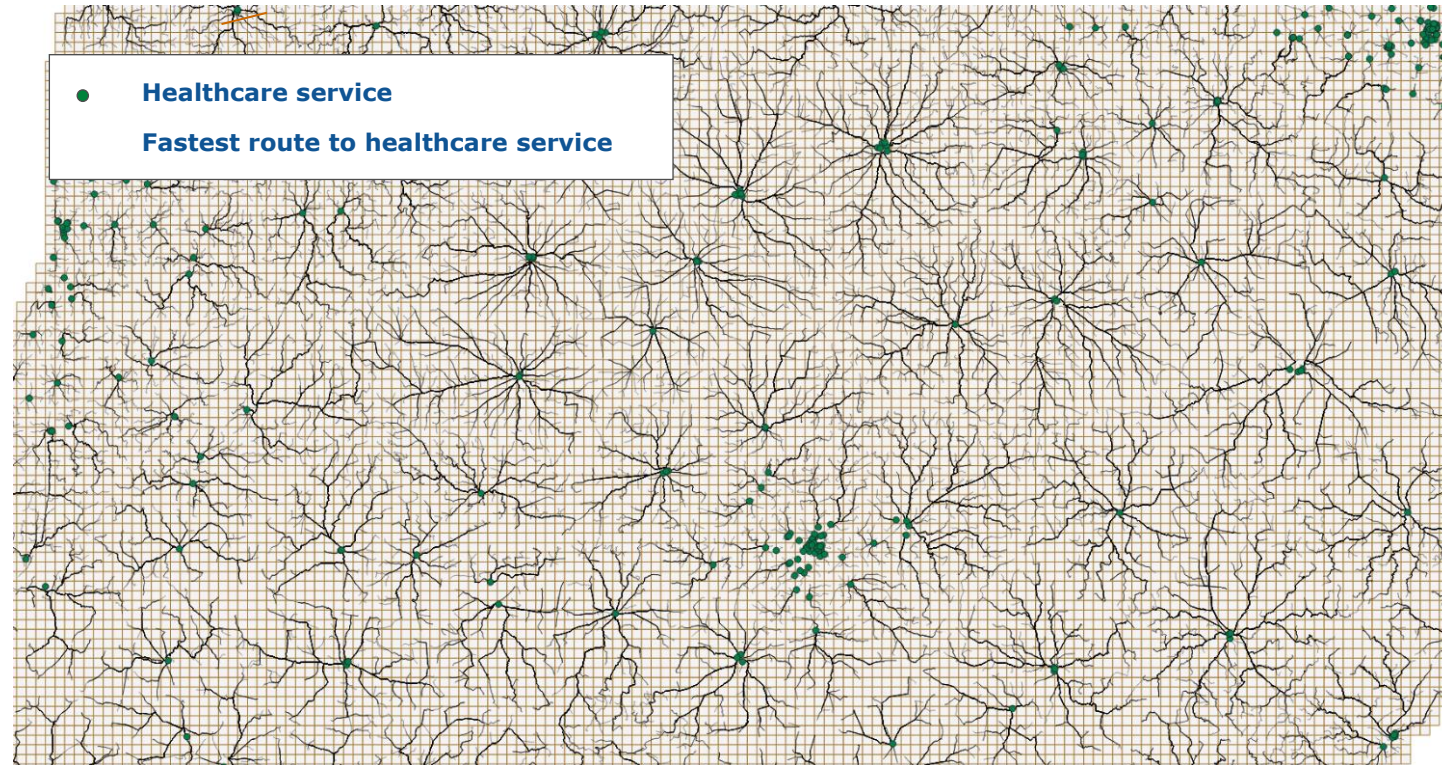

Development of pan-European data on Healthcare Services

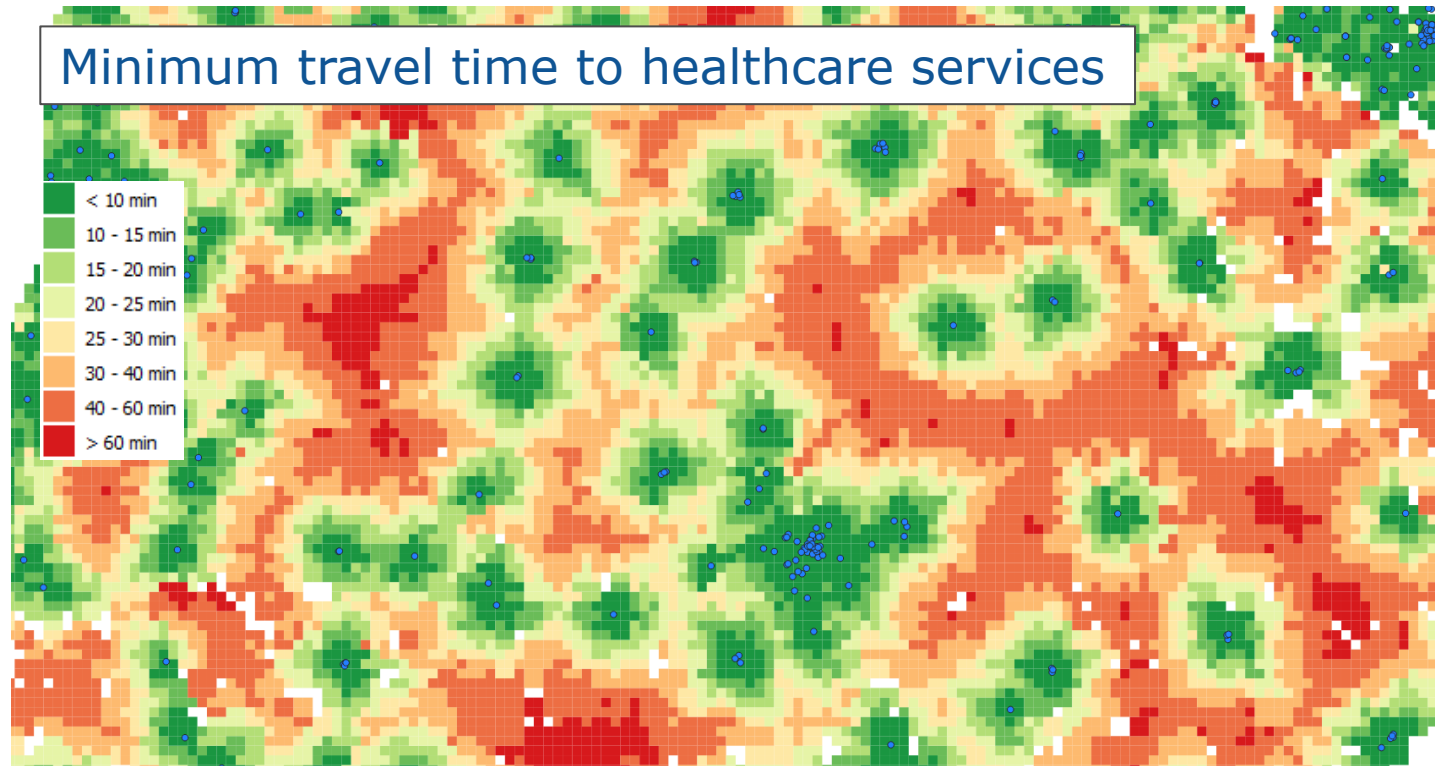

Combined with statistics (population grid)

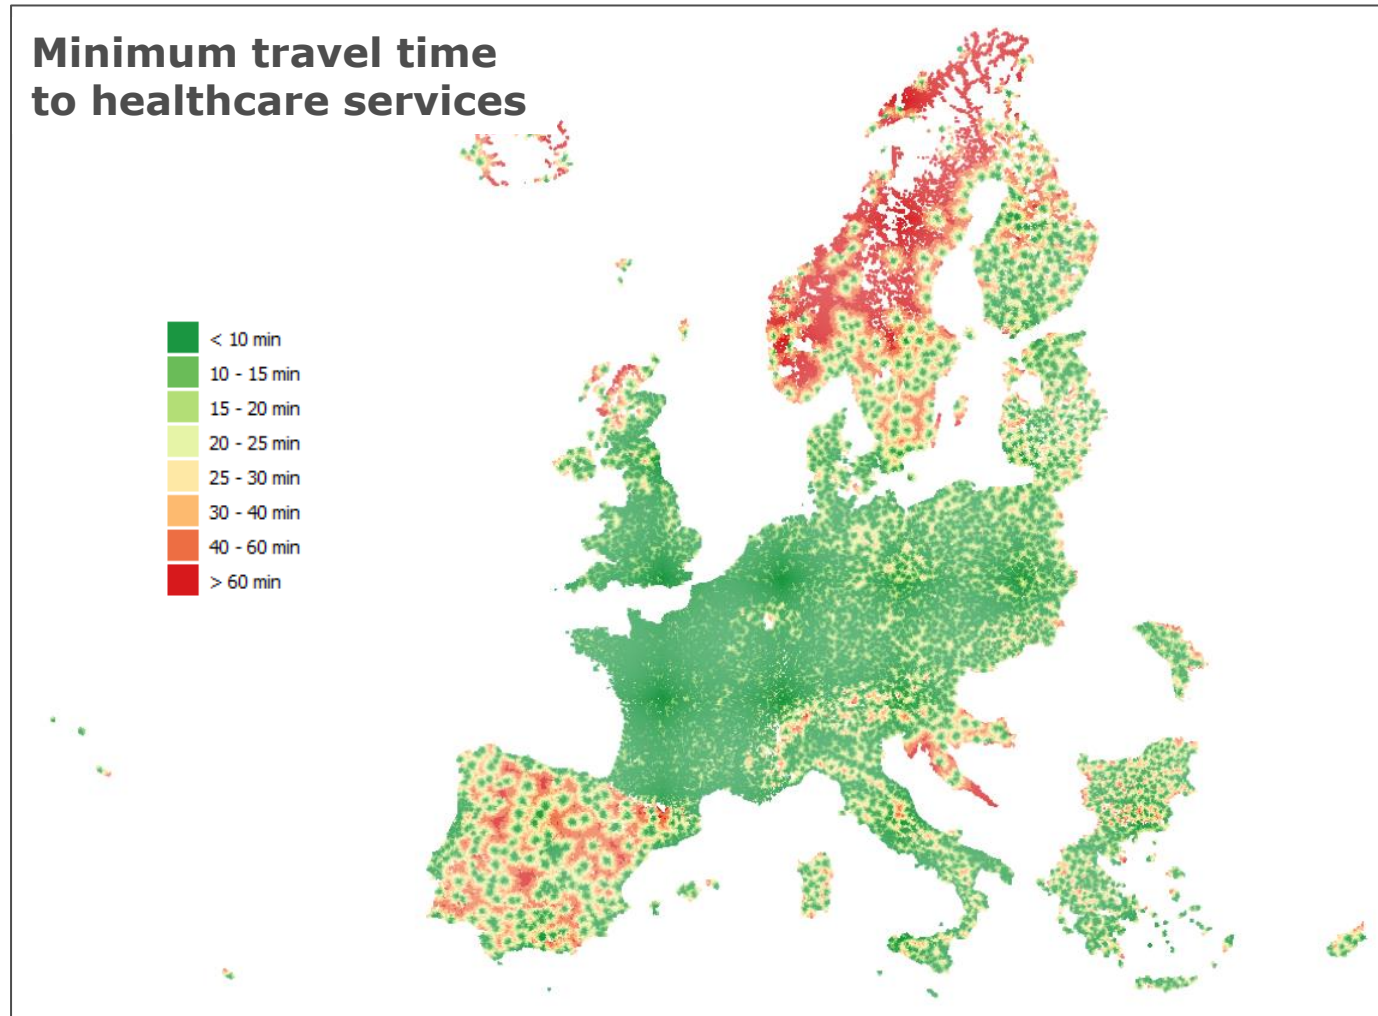

Development of pan-European data on Healthcare Services

Development of pan-European data on Healthcare Services

Development of pan-European data on Healthcare Services

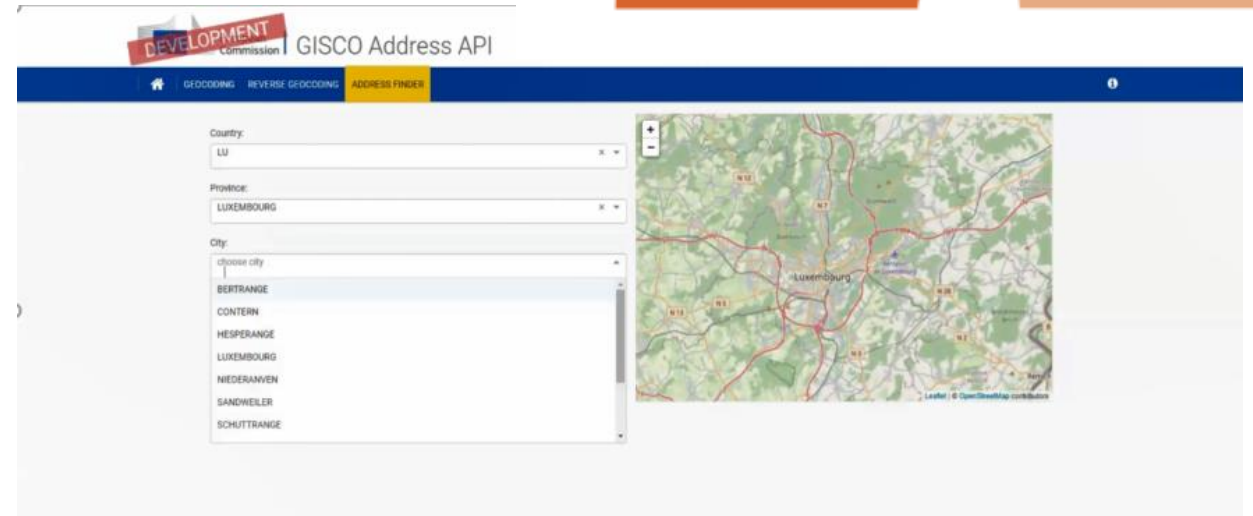

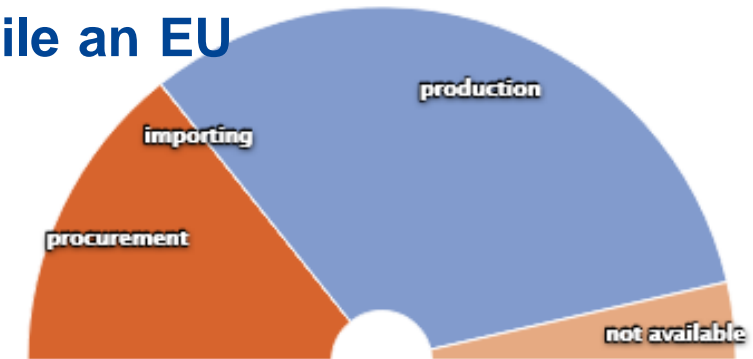

Development of pan-European data on addresses

Status 1.9.2020

Work in progress to compile an EU database on addresses

EC and international activities on geospatial information

- INSPIRE Directive revision process has started
 - Eurostat is part of the Coordination Team (DG ENV, JRC and EEA)
 - Impact assessment report - Q3/2020 to Q3/2021
 - Have your say: Open consultation until 16 October 2020

Link: <https://ec.europa.eu/info/law/better-regulation/have-your-say/initiatives/12427-Setting-up-an-Infrastructure-for-Spatial-Information-INSPIRE-Evaluation-of-the-Directive>

- Call for NMCAs to become a ONA
 - <https://ec.europa.eu/eurostat/web/european-statistical-system/overview>

EC and international activities on geospatial information

- Eurostat represents the European Commission to the UN-GGIM
- Active contribution to the UN-GGIM: Europe - ExCom
- Support for plenary meetings, and the activities of the UN-GGIM: Europe Working Groups
- Leading of the UN-GGIM sub-group on data integration methods (participation: 7 NMCA & 5 NSI).
- Contribution to the UNECE Task Team on the application of GSBPM for Geospatial Information, under the UNECE High-level Group for the Modernisation of Official Statistics

Continue supporting the cooperation of NSI-NMCA and work with you also at technical level to get a better insight on how we can implement effectively data integration

Thank you for your attention
