

The background of the slide is a detailed geological image showing various rock formations. On the left, there are light-colored, layered rock faces. On the right, a dark blue, crystalline rock structure is visible, overlaid with a white geometric pattern of triangles and polygons, resembling a map or a data visualization. The overall image has a textured, three-dimensional appearance.

# Update from Eurogeographics

Angela Baker  
Programme Manager – Data Access and  
Integration

# Data Access and Integration Strategy

Members gave a mandate at the GA2019 for the Head office to deliver the operational plan for 2020, This plan will deliver the following activities:

- [Signpost our members' national data](#) to end users, by facilitating access to members national datasets through their own geoportals.
- [Develop a minimum viable offering](#) enabling users to:
  - Discover our member's national data services by providing a catalogue of member services;
  - Find, review and access current EuroGeographics products;
  - View online case studies demonstrating the value of specific fundamental data themes, and
  - use this as a promotional tool.
- Review [licensing of ERM](#), to make it available as [open data](#) in line with the Directive on open data and the re-use of public sector information.
- Review [EuroDEM 60](#) with a view to making it available as [open data](#), and consider updating and increasing the resolution of the dataset to create EuroDEM30.
- Continue to offer the [Regional Gazetteer](#) and [Cadastral Index Map](#) as a service; and [build on the coverage](#) of both datasets.
- Consider offering additional datasets, like imagery in the first instance.
- Develop further fundamental datasets and explore funding opportunities to extend the current offering where affordable.

# Open Maps for Europe

Current activities include:

- A student will be coming in to research member's geoportals
- Letters are drafted to go to members asking for permission to make ERM / EuroDem open
- Extended the contract for the Open ELS user interface, will tender for technical activity once CEF bid outcome is known
- CEF bid outcome should be known in May

**Production of current products is NOT affected in any way**

# Knowledge Exchange

## Status of the KENs:

The objective of the Association is to sustain our knowledge exchange activity within the currently available resources, ensuring that a more consistent approach to support is given to knowledge exchange.

Following the refocusing with agreement of the Members and the MB, the Association now has four knowledge exchange networks and two knowledge forums.

KENS: Quality KEN, Policy KEN, CLR KEN, INSPIRE KEN

Forums: SBE, Positioning

Organised by	Event	Date	In partnership	Venue
