

Operative and effective response to COVID-19 through GIS at Cadastral Committee of the Republic of Armenia

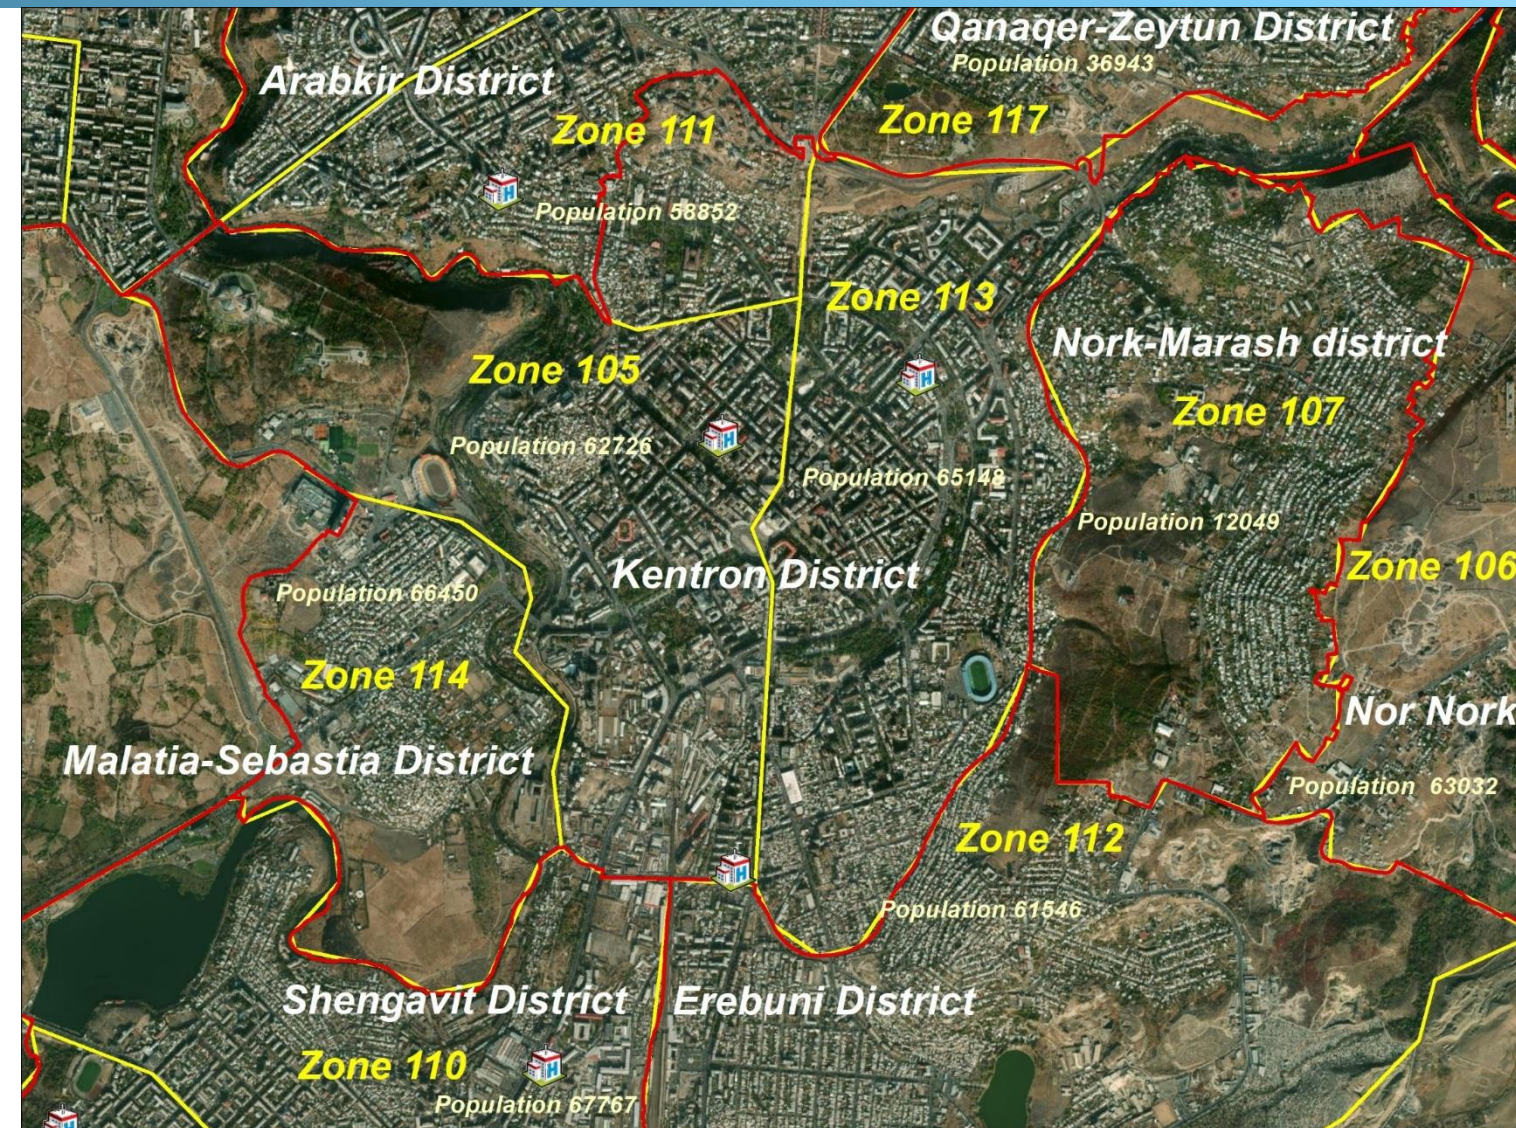

Vahagn Muradyan

Head of the Center of Geomatics

Main functions of the Center of Geomatics

GIS electronic map of responsible hospital zones for COVID-19 prevention

For the prevention and control of coronavirus disease in the Republic of Armenia, specialists of the “Center of Geomatics” subdivision participated in the process of creating GIS electronic maps for the relevant state bodies within the scope of cooperation. Based on the number of population, the territory of the Republic of Armenia was divided into zones and a responsible hospital, corresponding subdivisions of the appropriate authorities were separated for each zone. These electronic maps have contributed to the improvement of work productivity on the prevention of coronavirus disease and effective organization of work of the relevant state bodies.

GIS electronic map of police security stations for COVID-19 prevention

For the prevention of COVID-19, Cadastre Committee of the RA in cooperation with the Ministry of Police, Ministry of Emergency Situations has developed GIS electronic map of police security stations.

Creation of address unified database

Employees of Geospatial data management unit of the “Center of Geomatics” subdivision carry out works on bringing the old and new addresses of the Republic of Armenia into a standard form and creating a unified platform for the address system. As a result of intensive cooperation with the local self-governing bodies, works are implemented on correcting geographical names for the areas located inside the settlements in the whole territory of the Republic of Armenia.
