Group B: break-out session report

- Attending
  - CH
  - ES
  - IE
  - IT
  - MT
  - ND
  - PT
- Missing
  - GE

Major risen issues

- Difficulties with tracing modifications

  - Who's concerned? Producers correcting their master database and not ERM directly

  - Suggested solution: Using an ID given by the national producer and the Editor Tracking feature in ArcGIS

- Missing the official national datasets

  - It would be nice to get them at the end of the process, as before

- Final versions of EBM and ERM (.1) delivered late

  - Hopefully they'll be available earlier next year

- Lack of visibility into Eurostat's use of the data

  - Problems found when they compared data from other sources

Other broached topics

- Consistency between EBM and ERM-BND fully followed

- The new process including features on international boundaries well understood

- Use of the validation tools

  - The Python tools and support provided by RC have been appreciated

  - Producers not using validation tools yet are eager to do so

  - The C# tools (from Cédric) are unusable

  - RC will clarify some uses of the topology rules

- To notice

  - PT will lose their ArcGIS licence
