

# Edge Matching

Regine Elling, BKG

## Webinar of the EG Data Producers to kick-off production

# Agenda

International Boundaries

Edge Matching Process

Connecting Features

Features located on the International Boundary

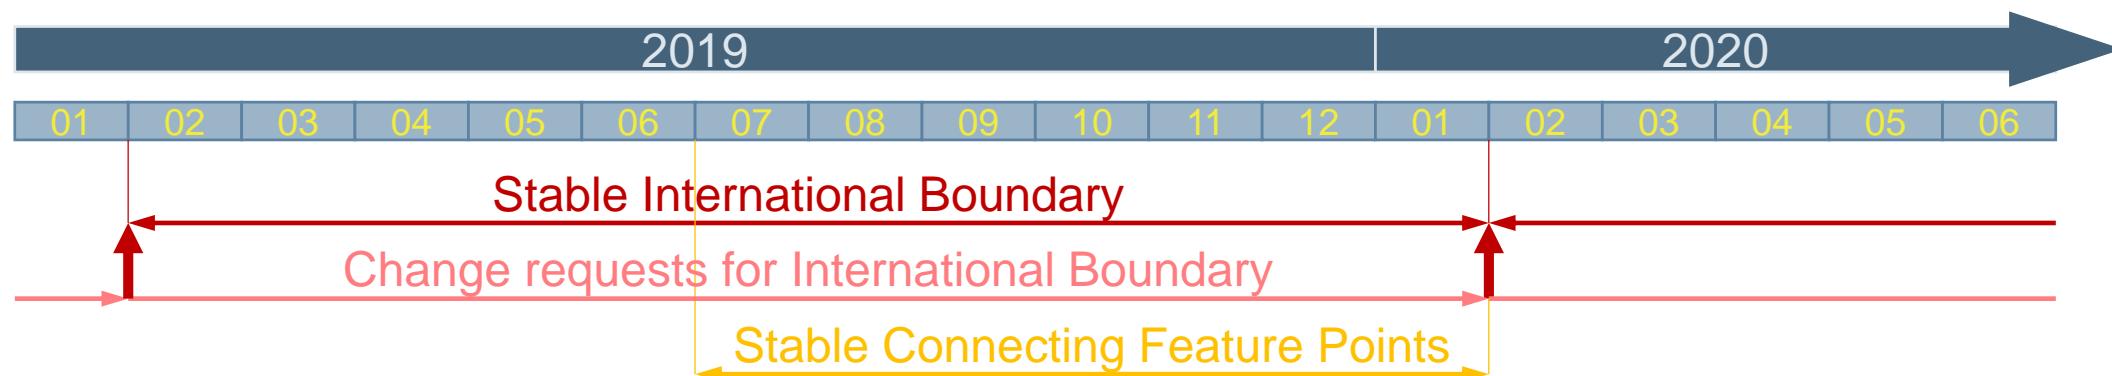

# International Boundaries

- International Boundaries:
  - IB Master
  - **IB Regional** → Valid version: **IB\_Regional\_2020.gdb** (on BKG-FTP)
  - IB Global
    - NMCAs are not allowed to make any changes on these boundaries on their own
- In case of issues (International Boundaries, Connecting Features, features on border)
  - Contact: [ebrm@bkg.bund.de](mailto:ebrm@bkg.bund.de)
- Please keep in mind:  
**We don't aim to find the legally defined international boundaries. We do need pragmatic solution how to represent the boundaries in medium scale for the products EBM and ERM.**

# International Boundaries

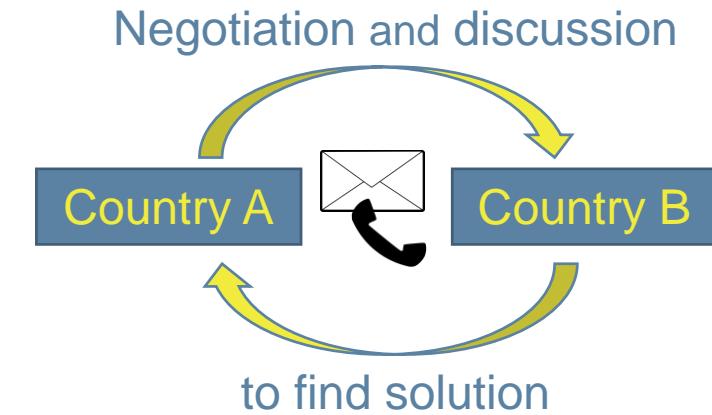

- Change management
  - Changes of International Boundary (IB) or Connecting Features (CF) have to be accepted by neighbouring countries!
  - IB is now stable for EBM/ERM 2020
  - Changes for CFs can be accepted until June 2019
  - Change requests for IB to be valid in EBM/ERM 2021 until January 2020

# Edge Matching Process

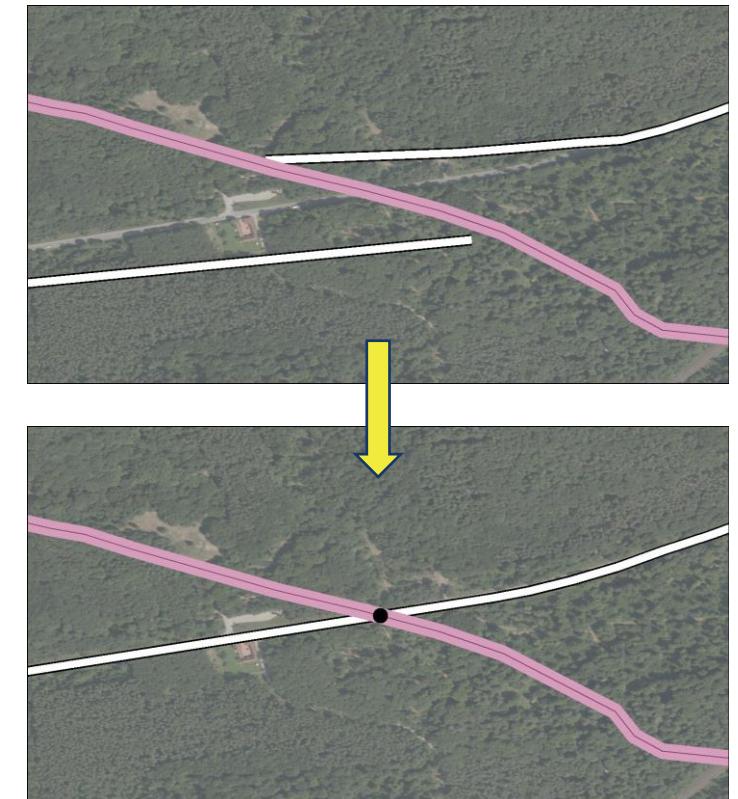

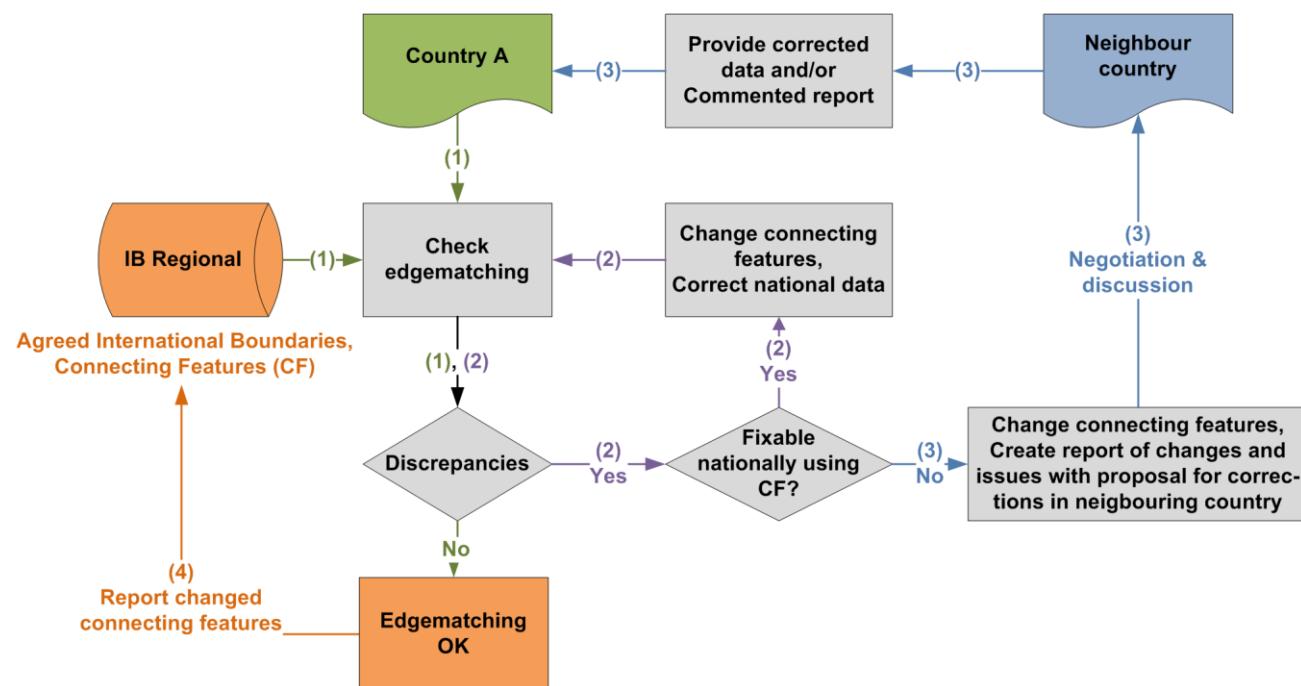

- Initial Edge Matching
  - High degree of coordination between neighbouring countries
  - Time-consuming
  - Are results taken over in national databases?  

- Solution for EBM and ERM
  - Optimizing coordination processes
  - Saving results as Connecting Features  
→ Represent locations on the IB Regional where features from neighbouring countries connect
  - Concept and workflow well described in ERM Edge Matching Rules, section 1.2.1 pp

# Edge Matching Process

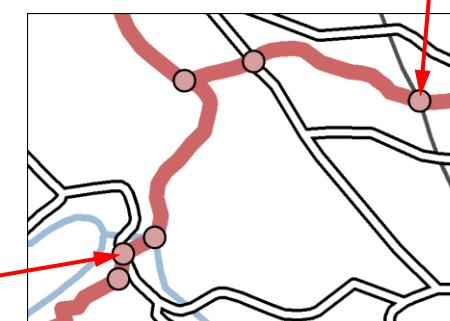

- Workflow of ERM edge matching procedure using IB Regional and Connecting Features:

# Connecting Features

- Connecting Feature Points (CFP)
  - Serve as anchor for repeatable edge matching
    - Support and simplify process
    - Reduction of time-consuming coordination between countries
  - Not necessarily located on a vertex of the International Boundary
  - Have to be snapped properly to the International Boundary
  - If you change Connecting Features
    - Don't create new vertices on the International Boundary!

Field	Value

# Connecting Features

- Attributes of Connecting Feature Points (CFP)
  - INSPIRE attributes (inspireID, beginLifespanVersion, endLifespanVersion)
  - country: ICC of countries which are effected
  - featureType: Feature class(es) which are effected
  - status
    - 1 approved
    - 2 proposed for addition
    - 3 proposed for suppression
    - 4 changed
    - 5 unsolved
  - feedback: Hints for Data Producers to consider provided by BKG

Status	Meaning
1	approved
2	proposed for addition
3	proposed for suppression
4	changed
5	unsolved

feedback
move to west
move to east
geometry RoadL FR east
DE Road not in ERM
DE control IntercC
control RoadL with border; maybe for ERM an border
control RoadL with border; maybe for ERM an border
control RoadL with border; maybe for ERM an border
control RoadL
control RailrdC

connect RoadL SI
connect RoadL RS
connect RoadL ND
connect RoadL MK

# Connecting Features

	Before edge matching	After edge matching	EXAMPLES
Usage of existing CFP:			
Need of movement of CFP:			
Need for new CFP:			

# Connecting Features

- How to go on if a solution for Edge Matching is found?

Available CFP can be used

Use CFP and everything is fine

CFP has to be moved or created or CFP can be deleted

1. Contact appropriate neighbor and discuss issue
2. Find a common solution for all involved countries
3. Send email to Production Management Team at BKG ([ebrm@bkg.bund.de](mailto:ebrm@bkg.bund.de)) and in copy the responsible Regional Coordinator
  - Email trail confirming the solution
  - FileGeodatabase with moved CFP / new CFP / deleted CFP
4. Change of CFPs will be checked and incorporated in IB Regional by BKG
5. BKG will inform Data Producers and Regional Coordinator about change

# Features located on the International Boundary

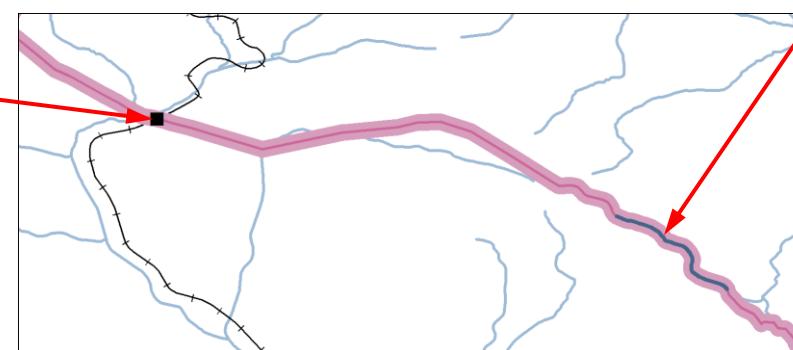

- Aim
  - Stable International Boundary  
→ Stable features on International Boundary with correct attributes
  - Support EGM
- ERM\_FeaturesOnBorder
  - Provided by Production Management Team at each kick-off for production
  - Feature classes affected:

-  **ERM\_featuresOnBorder**
  -  **DamC**
  -  **DamL**
  -  **RailrdC**
  -  **RapidsC**
  -  **RoadL**
  -  **WatcrsL**

# Features located on the International Boundary

- Precondition: Features have to be properly edge matched
  - Agreement between neighbouring countries on a common representation of the features
  - Complete attribution
  - Features must have two ICC-Codes separated by “#”

# Features located on the International Boundary

- Workflow is described in ERM Edge Matching Rules, section 1.2.4

No real change of features on IB

NMCAs have to exclude such features from their update

Real change of features on IB

1. NMCAs have to apply edge matching process
2. NMCAs have to inform Regional Coordinator about the agreed new solution and send new features within an extra database
3. Validation of changed features by Regional Coordinator
4. Regional Coordinator send validated features to ERM Production Management Team within an extra database
5. Production management updates the IB Regional ERM\_FeaturesOnBorder dataset

## Webinar of the EG Data Producers to kick-off production

# Thank you for your attention!
