

# MIWP-5: Validation & conformity testing – Overview & ATS Development

Michael Lutz

Workshop on validation, Marne-la-Vallée, 2-3 June 2016

[www.jrc.ec.europa.eu](http://www.jrc.ec.europa.eu)

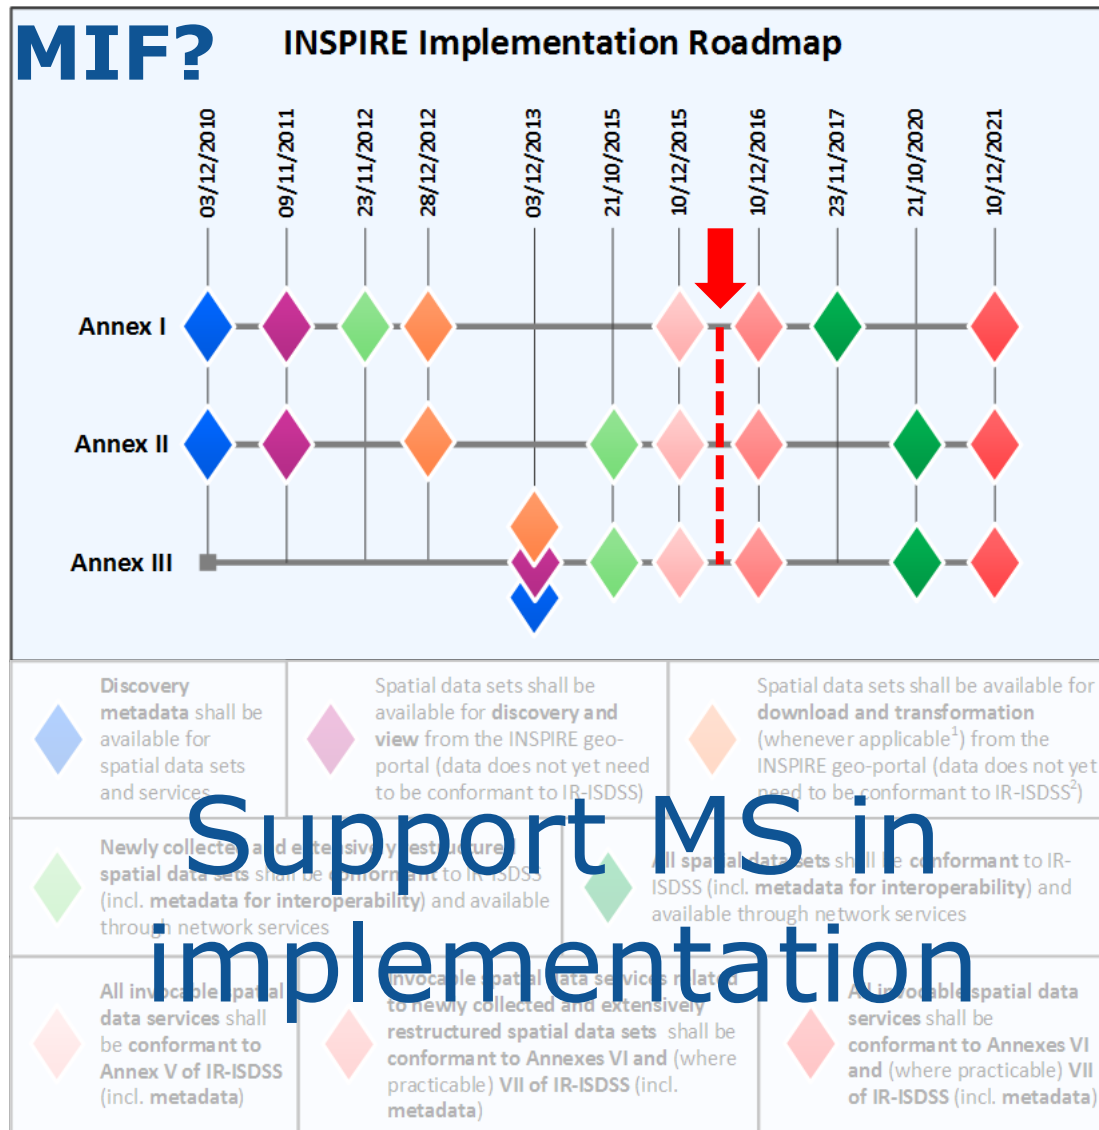

*Serving society  
Stimulating innovation  
Supporting legislation*

# Content

- The INSPIRE maintenance and implementation framework (MIF)
- Why an action on validation and conformity testing
- Current status & next steps
- ATS development

# Why the MIF?

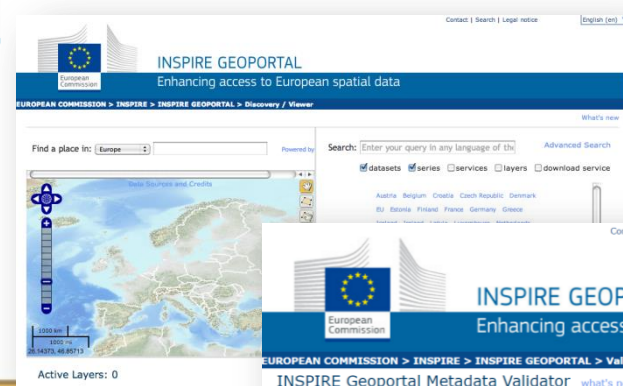

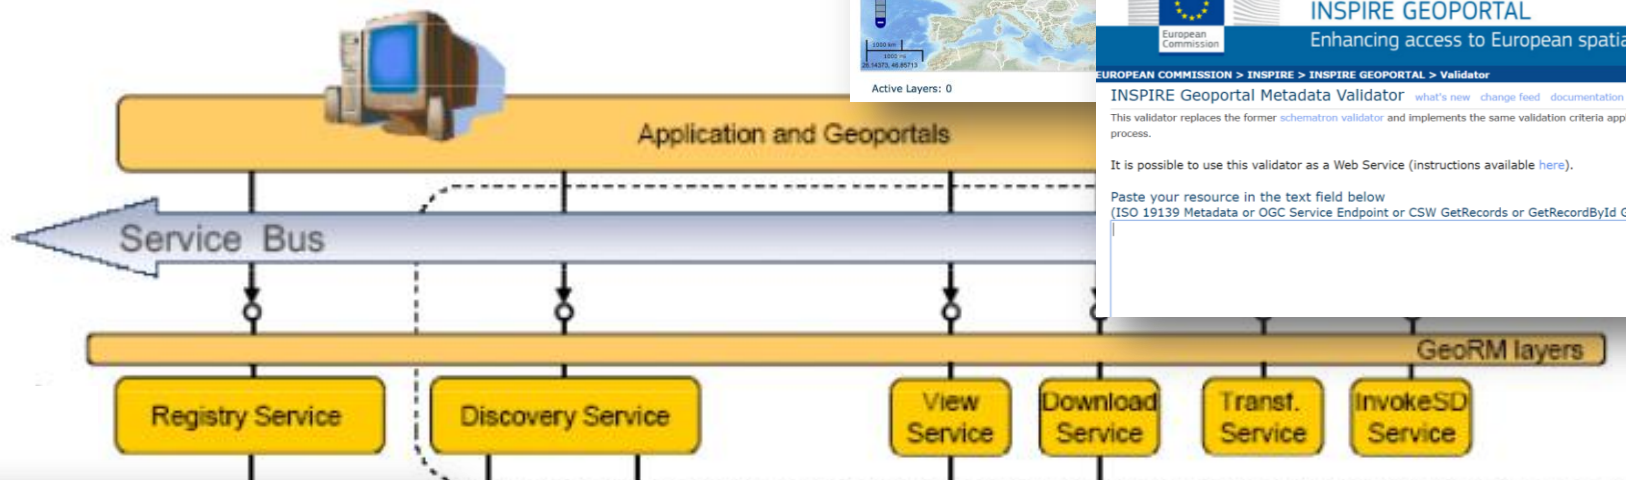

# Support MS in implementation

# Why the MIF?

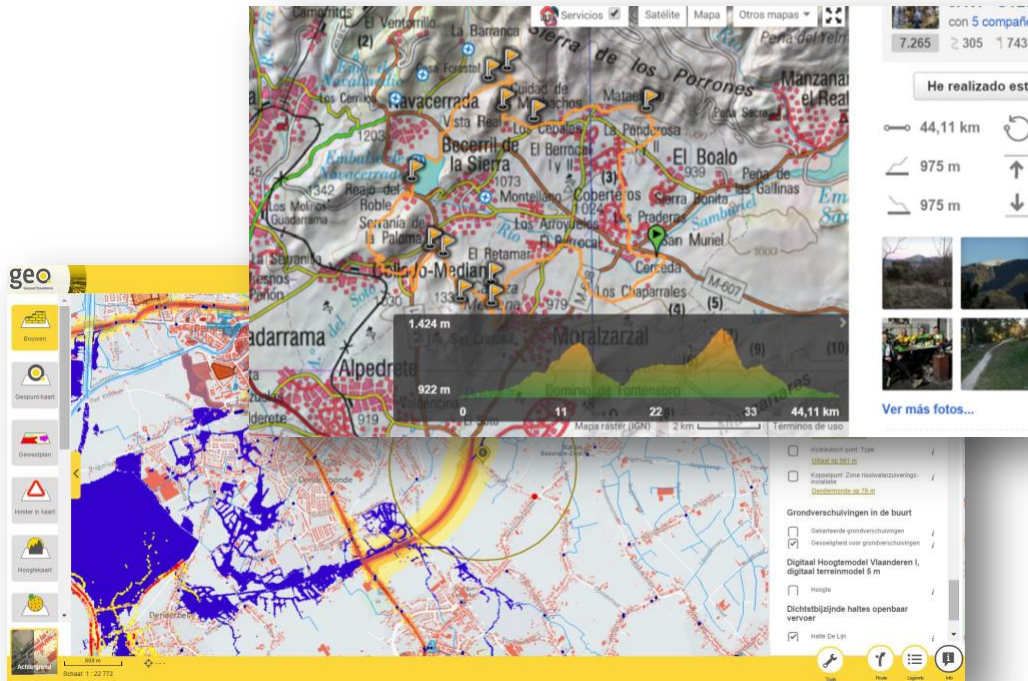

Maintain 6 legal acts and  
40+ Technical Guidelines

# Why the MIF?

# Develop and maintain central infrastructure components and tools

# Why the MIF?

# Support technical evolution and use of INSPIRE data & services

# Why the MIF?

Coordinate with other policies  
and discuss strategic direction

# MIWP-5 Validation & conformity testing

- In the implementation phase there is a need for tools for validation (of metadata, services, data)
  - for implementers to understand where they are with their implementation & where there are gaps
  - for national coordinators for monitoring the implementation in their countries
  - for DG ENV/JRC/EEA to monitor the implementation across Europe
  - for solution providers to check their software solutions against the INSPIRE requirements
- Validation service available from JRC and in some Member States and projects
  - duplication of effort
  - potentially inconsistent results

# MIWP-5 Validation & conformity testing

- Main goal: Development of validation rules and tools for data, metadata & network services that are
  - commonly agreed by all MS (through the MIG)
  - based on TG requirements → Abstract Test Suites (ATS)
- Actors:
  - MIWP-5 sub-group
  - Expert contracts for ATS development
  - ARE3NA contractors for ETS development and support to ATS development
- Wiki:
  - <https://ies-svn.jrc.ec.europa.eu/projects/validation-and-conformity-testing>

# Milestones

- Scoping workshop, May 2014
- Start ATS development, Nov 2014
- MIWP-5 kick-off meeting, Dec 2014
- Start ARE3NA activity on validation, Dec 2015
- Completion ATS development (MD+NS), June 2016
- 1<sup>st</sup> release INSPIRE testing framework and ETS: Aug 2016
- Completion ARE3NA activity on validation, June 2017

# TASK 1

## Sub task

1.1

***Define scope - ToR***

1.2

***Policies and procedures -  
Change management***

1.3

***Compliance certification***

1.4

***INSPIRE testing maintenance***

## TASK 2

### Sub task

2.1

***Define use cases for commonly agreed validator(s)***

2.2

***Specification of (functional and non-functional) requirements***

2.3

***Existing validation tools/ platforms and approaches***

2.4

2.5

***Design & implementation of INSPIRE testing framework***

2.6

***Collect schema & schematron existing examples - TC***

## TASK 3

### Sub task

3.x.1

**Develop ATS (MD, SDS, NS)**

3.x.2

**Compare existing  
implementation of IR requirements**

3.x.3

**Map requirements in IR to  
requirements in TG**

3.x.4

***Develop ETS based on ATS  
requirements***

3.5

**Investigate feasibility of testing  
INSPIRE data sets**

# ATS development

- Definition: set of conformance classes that define tests for all requirements of a specification
  - Conformance class: set of conformance test modules that must be applied to receive a single certificate of conformance
  - Test module: set of related tests, all within a single conformance class
  - Test case: test for a particular requirement or a set of related requirements

# ATS + conformance classes in TGs

- ATSs included in all INSPIRE data specifications
  - Starting with Annex II+III (according to the DS common template)
  - Annex I data specifications were updated as MIWP-10
  - Part A: IR requirements (several conformance classes)
  - Part B: TG requirements (one conformance class)
- TG for download services structured in conformance (or rather: requirements) classes, but no ATS
- Other TGs do not include conformance classes or ATS

# ATS development

- MWIP-5 draft ATSs
  - Initial draft: Nov 2014 – Feb 2015
  - Final draft: Sep-Nov 2015
  - Involving several expert contracts
  - In Github: <https://github.com/inspire-eu-validation/>
- TGs covered
  - Metadata v1.3
  - Discovery NS v3.1
  - View NS v3.11
  - Download Service (Atom, WFS Pre-defined download and Direct Access) v3.1
  - Interoperability metadata (DS v3.x)
  - Spatial data services (v3.1)

## Provide a title element

### Purpose:

The "title" element of an Atom Download Service feed shall be populated with a human readable title for the feed

### Test method

- the [feed title](#) must be non-empty text; the text content must include at least one alpha-numeric letter.

### Reference(s):

- [IR NS](#), M1, section 2.2.1, Download Service Metadata parameter
- [TG DL](#), Req 5

Test type: Automated

### Notes

## Contextual XPath references

The namespace prefixes used as described in [README.md](#).

Abbreviation	XPath expression
feed title	/atom:feed/atom:title

<https://github.com/inspire-eu-validation/ats-download-atom/blob/master/A.05.IR221.TGR5.feedTitle.md>

# ATS development

- MIWP-5, ARE3NA and MIG-T review
  - Several detailed issues on proposed tests
  - Consistent terminology should be used
  - Proposed consistent structure for all ATSs
    - TG → CC → Test case
  - Review revealed issues in the TGs → 2 types of TG change requests
    - vague requirement → document the interpretation in the ATS (to be taken into account in future TG updates)
    - technical changes to the TG → reject the resolution and follow the standard TG update process through the MIG
  - Several issues related to cross-component consistency → flag issues to get a first overview
    - Need for an additional “SDI consistency” TG?

# ATS development – next steps

- Develop Additional ATSs for
  - Data specification TGs (→ Clemens' presentation)
  - SDS TG v4.0
  - MD TG v2.0
- Further improvement of existing ATSs based on feedback from ETS implementation
- Discuss feedback on TGs from ATS development with the MIG-T
